SUMMARY

Computer Science student with software engineering experience in building backend services and data-intensive applications. Developed a scalable Python and PostgreSQL system processing over 6 million records and deployed automated analytics tools for coaching staff. Proficient in Python, Java, and SQL, and familiar with REST APIs, with a solid foundation in data structures, algorithms and object oriented programming.

EDUCATION

University of Arizona, Tucson, AZ

Bachelor of Arts in Computer Science | Minor in Sports Management

Grad May 2026 | GPA: 3.86

EXPERIENCE

Infosys - Software Engineer Intern

Tempe, AZ | Jun 2025 – Aug 2025

- Designed and implemented a Python + PostgreSQL system to automate large-scale data validation across healthcare databases, processing 6M+ rows and improving accuracy of discrepancy detection
- Generated automated Excel reports highlighting inconsistencies between datasets, improving traceability and reducing manual review time
- Optimized comparison algorithms for performance and scalability, enabling efficient processing of high-volume structured data

Arizona Football - Software & Recruiting Intern

Tucson, AZ | Aug 2025 – May 2026

- Developed and deployed automated roster analytics tools used by coaching staff, eliminating manual data collection workflows
- Analyzed weekly performance data for high school recruits, generating percentile rankings across large historical datasets to support evaluation decisions
- Built data-driven tools and dashboards that streamlined recruiting workflows and improved identification of high priority prospects across large datasets

University of Arizona - Undergraduate Teaching Assistant

Tucson, AZ | Jan 2024 – May 2026

- Supported 100+ students in mastering data structures and algorithms through weekly office hours
- Led review sessions and graded 200+ assignments, contributing to a ~10% increase in overall class performance

PROJECTS

[AI Job Application Agent \(Github\)](#)

- Built an AI-powered job application agent that analyzes resumes, identifies skill gaps, and generates tailored cover letters
- Designed a multi-step LLM workflow using the OpenAI API to iteratively refine outputs using resume context and job requirements
- Implemented PDF parsing, structured JSON validation, and a Streamlit interface for real-time interaction

Football Roster Analyzer

- Built a data pipeline to automate football roster analytics, reducing manual work from days to ~20 minutes/week
- Processed weekly performance data to generate position-level metrics and efficiency statistics
- Integrated with Google Sheets and automated workflows using GitHub Actions for scheduled execution

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, Typescript, C, C#, MIPS Assembly

Data: PostgreSQL, Pandas, NumPy, Plotly Express, Tableau

Web: REST APIs, FastAPI, React, HTML, CSS, JSON, Node.js, Express, Streamlit

Tools: OpenAI API, Git, GitHub, Linux, Unix, Prompt Engineering, LLM Workflows, VS Code, Eclipse, JUnit, Agile Development
